

REMARKS

The pending claims have been amended to call for the recording of a first and second loop. The user can then selectively have played back either the first loop or the second loop.

In the cited Sisselman reference only a single loop is provided. Within that loop three different sections may be separately called back. However, in order to find the segment A, B, or C, the system must search through the loop to find it, identify it, and play it back. With the claimed invention, separate loops may be provided which may be separately played back.

In view of these remarks, the application should now be in condition for allowance and the Examiner's prompt action in accordance therewith is respectfully requested.

Respectfully submitted,

Date: _____
